## Non invasive treatments

### 1 The neck lift

The SmartLipo MPX system is used to tighten and lift the neck.

**HOW DOES IT WORK?** A small incision is made under the chin and a combination of lasers is inserted under the skin. This breaks down fat cells, dissolving them into a liquid which is then sucked away. SmartLipo helps reduce a double chin and makes your neck look more taut.

**IT COSTS** from £2000. For more details contact Dr Al-Ayoubi

at the London Medical & Aesthetic Clinic (020 8342 1100; [www.lmaclinic.com](http://www.lmaclinic.com)).
